

Note: Page numbers with “f” denote figures.

A

- Aanderaa current meter, 242–249
- Absolute velocity profiler (AVP), 314, 315f
 - free-falling, acoustically tracked, 318–320
- AC, *see* Azores Current
- ACC, *see* Antarctic circumpolar current
- ACM, *see* Acoustic current meter
- Acoustically focused oceanographic sampling (AFOS), 410
- Acoustically tracked free-fall current velocity and CTD profiler (TOPS), 326–328
- Acoustically tracked freely sinking pingers, 305–308
- Acoustic current meter (ACM), 282–283
- Acoustic Doppler current meter, 81–82, 291–294
- Acoustic Doppler current profilers (ADCPs), 68, 118–119, 407–409
 - bottom-mounted, upward-facing, 344–353
 - directional wave-measuring, 346
 - horizontal, 370–371
 - lowered, 367–368
 - RDI WorkHorse ADCPs, 352–353
 - single upward-facing, 346–350
 - vertical current profiling using, 339–380
 - AUV-mounted ADCPs, for current profiling, 368–369
 - for AUV navigation, 369–371
 - basic assumptions and operational issues, 340–341
 - calibration of, 371–372
 - downward-facing shipboard ADCPs, 360–362
 - evaluation of, 372–374
 - horizontal-facing ADCPs, 354–358
 - intercomparison of, 372–374
 - limitations of, 374–375
 - merits of, 374–375
 - operation principles, 341–344
 - profiling geometries, 344–353
 - subsurface moored ADCPs, 358–359
 - towed ADCPs, 363–367
 - trawl-resistant ADCP bottom mounts, 353–354
- Acoustic radiation, 291
- Acoustic surface tracking (AST), 347–349
- Acoustic Thermometry of Ocean Climate (ATOC) project, 66–67
- Acoustic tomography, 66–69
 - coastal, 68–69, 215–226, 410
 - ocean, 66–68, 201–240
 - river, 69, 226–230, 409–410
- Acoustic travel time (ATT) difference sensors, 74, 281–290
- Acoustic velocity meters (AVMs), 226
- Acoustic wave and current (AWAC) profiler system, 349–350
 - Platform Mount, 351–352, 351f
- Active microwave radar imaging, 61–62
 - of sea surface current signatures, 153–154
 - technologies of, 154–166
- Active radiometry, in visible-wavelength band, 145–146
- Active sensors, 139–140
- ADCPs, *see* Acoustic Doppler current profilers
- Advanced Research and Global Observation Satellite (ARGOS), 93–94, 99
- Advanced very high-resolution radiometer (AVHRR), 60, 148–149
- Aerial photography
 - of surface water motion trajectories and patterns, 57–60
 - in visible and infrared bands, 140–141
- AFOS, *see* Acoustically focused oceanographic sampling
- AGC, *see* Automatic gain control
- Agulhas Current, 22–24
- Agulhas retroflection, 22–24
- Aircraft-borne side-looking microwave radar systems, 401–402
- ALACE, *see* Autonomous Lagrangian Circulation Explorer
- Almaz SAR system, 166
- ALOS, 167
- Ametek-Straza Doppler current profiler, 361
- Amplitude reduction, 164
- Antarctic circumpolar current (ACC), 1–2, 6–7, 13–15, 14f
- Antenna temperature, 152
 - apparent, 150
- APEX floats, 413–414
- Apogean current, 36
- Apparent antenna temperature, 150
- Arbitrary zero point, 391
- ARGOS, *see* Advanced Research and Global Observation Satellite
- Aries, 31

- Array for real-time geostrophic oceanography (Argo)
 - floats, 6–7, 178–180, 189–198
 - program, 414
- AST, *see* Acoustic surface tracking
- Atlantic Ocean
 - Brazil Current, 17–20
 - equatorial undercurrents in, 25–27
 - Gulf Stream, 5, 6f, 11, 15–17, 325
 - North, 17
 - western boundary currents in, 15–20
- ATOC, *see* Acoustic Thermometry of Ocean Climate project
- ATT, *see* Acoustic travel time difference sensors
- Automatic gain control (AGC), 118–119
- Autonomous Lagrangian Circulation Explorer (ALACE), 192–195, 413–414
- Autonomous underwater vehicles (AUVs), 368, 410
 - mounted ADCPs, for current profiling, 368–369
 - navigation, acoustic Doppler current profilers for, 369–371
- AUVs, *see* Autonomous underwater vehicles
- AVHRR, *see* Advanced very high-resolution radiometer
- AVMs, *see* Acoustic velocity meters
- AVP, *see* Absolute velocity profiler
- AWAC, *see* Acoustic wave and current profiler system
- Axis-crossing counting technique, 342
- Azimuth image shift, 164
- Azimuth image smear, 164
- Azimuth resolution enhancement of, 160–163
- Azores Current (AC), 17

B

- Backscattering, 109–110, 110f
- Backward-scatter laser Doppler sensor, 78–80, 86f
- BASS, *see* Benthic Acoustic Stress Sensor
- BC, *see* Brazil Current
- Beacon survey method, 319, 319f
- Beam forming, 116–117, 117f
- Benthic Acoustic Stress Sensor (BASS), 84–85, 285–290

Biaxial dual orthogonal propeller vector-measuring current meters, 253–255
 Bidirectional propeller sensor, 263
 Bins, 340–342, 341f
 Biplanar crossed vanes, 177–178
 Black body, 146
 Bottom-mounted, upward-facing ADCPs, 344–353
 current profile of, 347–350
 single upward-facing ADCP, 346–350
 surface currents–gravity wave orbital velocities combination, 345–346
 wave measurements of, 347–350
 Bottom-mounted, winch-controlled vertical automatic profiling systems, 302–305
 Bragg frequency, 111
 Bragg resonance, 153–154
 sea surface current estimation using, 113
 Brazil Current (BC), 17–20
 North, 18–20
 Brightness temperature, 152
 Broadband signal-processing technique, 343–344

C

Calibration
 of acoustic Doppler current profilers, 371–372
 of current meters, 255–258
 Carbon fiber-reinforced plastics (CFRP), 167
 Cartesian diver profiler, 315–318, 316f
 CAT, *see* Coastal acoustic tomography
 CCDs, *see* Charge-coupled devices
 CFRP, *see* Carbon fiber-reinforced plastics
Challenger, 166
 Charge-coupled devices (CCDs), 143
 Chirp pulse, 157
 Circle of inertia, 33–34
 Coastal acoustic tomography (CAT), 68–69, 215–226, 410
 Coastal ocean dynamics applications radar (CODAR), 62–63, 121, 403
 Coastal ocean surface radar (COSRAD), 62–63, 403
 Coastal Zone Color Scanner (CZCS), 142–145
 CODAR, *see* Coastal ocean dynamics applications radar
 Coherent processing, 343
 Cold-core eddies, 6–7, 383–384, 383f
 Collinear passes, 391
 Coriolis's force, 34
 Coriolis parameter, 31, 385
 Correlated pulse pairs, 343–344
 Cosine response, 253–254
 horizontal, 253–254
 vertical, 253–254
 COSMER, *see* Courants de Surface MESures par Radar
 COSRAD, *see* Coastal ocean surface radar
 Courants de Surface MESures par Radar (COSMER), 403
 Cromwell Current, 27
 Crossover points, 79, 391
 Cryosat-2, 394
 Current charts, 2, 51–52, 64
 Current-driven sea surface wave transport, vector mapping based on, 62–64
 Current meters, 70
 Aanderaa, 242–249
 acoustic, 282–283
 acoustic Doppler, 81–82, 291–294
 calibration of, 255–258
 electromagnetic, 269–281
 Savonius rotor, 72–74
 unidirectional impeller, 71–72
 vector-averaging, 249–250, 256–257
 vector-measuring, 254–255, 258
 Current rose, 34
 Cyclesonde, *see* Freely sinking and rising relative velocity probe
 CZCS, *see* Coastal Zone Color Scanner

D

Data collection and location system (DCLS), 98–99
 Davis Strait, 3
 DCLS, *see* Data collection and location system
 DDL, *see* Dispersive delay line
 Dead reckoning, 53
 Deep countercurrent, 16–17
 Deep jets, 299–300
 Delayed-mode quality-control system (DMQC), 197
 Delft Object-Oriented Interferometric Software (DORIS), 166
 DEM, *see* Digital elevation models
 Differential InSAR (D-InSAR), 61
 Digital elevation models (DEM), 165–166
 D-InSAR, *see* Differential InSAR
 Directional wave-measuring ADCP, 346
 Direct reading current meter (DRCM), 241, 250
 Dispersive delay line (DDL), 387
 DMQC, *see* Delayed-mode quality-control system
 Doppler centroid, 162–163
 Doppler shift, 109–110, 110f
 DORIS, *see* Delft Object-Oriented Interferometric Software
 Dot plots, *see* Scatter plot
 Downward-facing shipboard ADCPs, 360–362
 Downward-looking ADCPs, 341
 DRCM, *see* Direct reading current meter
 Drift card, 54–55, 55f
 Duncan, 54
 Olson, 54
 trajectories of, 54, 56f
 Drifter-borne Doppler transponder, 96–97
 Drifter-following radar transponder, 95–96
 Drifting profiling floats, 195–198
 profiling observations from polar regions, 197–198
 Drifting subsurface floats motion, measurements based on, 69–70
 Drift poles, 55
 Dual-scatter system, 79
 Duncan drift card, 54
 Dwell time, 160–161

E

EAC, *see* East Australian Current
 Early mariners' contributions to subsurface/abyssal current measurements, 64

 Shear (PROTAS), 330–332
 Probe volume, 79
 Profiling current meter (PCM), 300–302, 301f
 Profiling geometries, 344–353
 bottom-mounted, upward-facing ADCPs,
 344–353
 current profile of, 350–353
 single upward-facing ADCP, 346–350
 surface currents–gravity wave orbital
 velocities combination, 345–346
 wave measurements of, 350–353
 Progressive vector diagram, 258–259
 Propeller revolution registration, by
 mechanical counters, 71
 Propeller rotor current meter (Plessey current
 meter), 250–253
 PROTAS, *see* Probe Recording Ocean
 Temperature and Shear
 PTT, *see* Platform transmit terminal
 Pulse Doppler-radar echo spectra, peculiarities
 of, 112–113
 Pulse-limited geometry, 388
 Pulse rectangle of ground-resolvable area, 156
 Pulse repetition frequency (PRF), 158–159,
 161–164

R

RADARSAT-1, 167, 401–402
 RADARSAT 2, 167
 Radial vector currents, 120
 Radial velocity, 341
 component, 120
 Radiation stress, 39
 Radio buoys, 94–105
 drifter-borne Doppler transponder, 96–97
 drifter-following radar transponder, 95–96
 GPS-tracked drifters, 100–104
 telephonically tracked drifters, 104–105
 tracked by polar-orbiting satellites, 97–100
 Radiometers, remote detection by, 141–153
 active radiometry, in visible-wavelength band,
 145–146
 microwave radiometers, 149–153
 passive microwave radiometer
 instrumentation, 150–151
 passive microwave radiometry, 150
 scanning multichannel radiometers,
 151–153
 passive radiometry, in visible-wavelength
 band, 142–145
 passive radiometry, in thermal infrared band,
 146–149
 atmospheric effects and correction of, 148
 detectors, 147–148
 SST imaging, 148–149
 Radiometry, of surface water motion
 trajectories and patterns, 60
 RAFOS floats, 188–192, 412–413
 Range walk, 164
 RAR, *see* Real aperture radar
 RAT, *see* River acoustic tomography
 RDCP 600 profiler, 353

RDM, *see* Reflectivity displacement method
 Real aperture radar (RAR)
 active microwave imaging by, 155–158
 seawater circulation features detection using, 168–170
 Reciprocal tomography, *see* Two-way tomography
 Reflectivity displacement method (RDM), 164
 Remote mapping of sea surface currents, using HF Doppler radar networks, 109–138
 advantages of, 129–131
 Crombie's discovery, 110–112
 depth extent of, 113–114
 experimental developments of, 115–118
 instrumentation aspects of, 118–120
 intercomparison considerations of, 126–129
 operational scales development, 120–126
 coastal ocean dynamics applications radar, 121
 ocean surface current radar, 121–123
 SeaSonde, 123–124
 special applications systems for, 126
 Wellen Radar, 124–126
 pulse Doppler-radar echo spectra, peculiarities of, 112–113
 radial vector currents, 120
 round-the-clock coast-observing role of, 131–132
 sea surface current estimation, using Bragg resonance principle, 113
 shelf-observing role of, 131–132
 technological aspects of, 114–115
 total vector currents, 120
 tsunami-induced sea surface-current jets at continental shelves, detection and monitoring of, 132–133
 Residual current, 261
 Reynolds stress, 290
 Richardson number, 302
 Ridge valleys, tidal currents in, 34–36
 Rings, 9–10
 Rip currents, 36–40
 transient, 37–38
 River acoustic tomography (RAT), 69, 226–230, 410
 River discharge, 226, 230
 Roberts radio current meter, *see* Unidirectional impeller current meters
 Rocknes, 353
 Rotor pumping, 245–246
 Round-the-clock coast-observing role, of HF Doppler radar networks, 131–132

S

SAR, *see* Synthetic aperture radar
 Saral, 394
 Satellite altimetric measurements, technological intricacies in, 386–388
 Satellite altimetry, 381–396, 382f, 405–406
 data error correction in, 389–392
 geoid errors correction, 390–391
 orbit errors correction, 389–390
 topographic height variability independent of geoid, null methods for obtaining, 391–392
 evolution of, 392–394
 Satellite orbit errors correction, 389–390
 Satellite-recovered pop-up drifters, 178–180
 Satellite-tracked drifters, 400, 405
 Savonius rotor current meters, 72–74, 242–249
 miniature vane vector-averaging current meters, 249–250
 Scanning multichannel microwave radiometers (SMMR), 151–153, 389
 Scanning radiometer (SR), 60
 Scattering correlation time, 340–341
